

Roto Glas-Tec

Customised solutions for safe glazing

Roto Glas-Tec

Expertise in glazing packers

Experience, knowledge and superb quality

Roto, a global name for individual, innovative, and secure window and door technology, has for many years also been the leader in the field of glazing packers.

The choice of glazing packers is not a minor issue but a decisive factor in proper glazing. When it comes to glazing blocks, that has been reason enough for Roto to develop focused specialisation on the highest possible manufacturing quality, gathering experience over many years.

That is why Gluske-BKV, the market leader in the field of glazing packers at the time, was already integrated into the Roto company in 2008.

Roto Glas-Tec offers a comprehensive product range, enabling Roto to provide you with expert advice in all aspects of professional glazing.

With Roto you will also benefit from our unique testing service, because only Roto tests the compatibility of your composite edge sealants and laminated safety glass interlayers. Roto has been certified by the Institute for Window Technology (ift) Rosenheim for this process.

You will also receive all of the quality certifications which are compulsory for compliance with the Institute of Glaziers Technical Guideline No. 3.

This gives you comprehensive protection against any possible liability claims and expensive costs arising from complaints.

Material compatibility not tested in advance?

Glazing packers fulfil their function out of sight, but if they are poorly matched with composite sealants the consequences will soon become apparent.

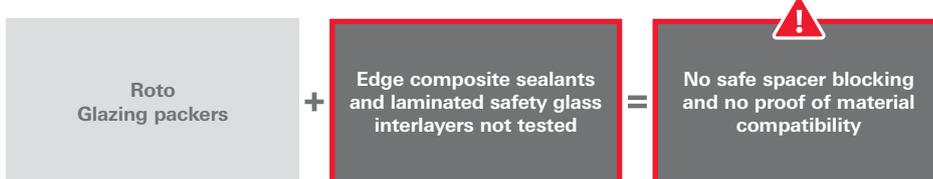

Chemical reactions can take place between the glass, edge seal and glazing packer material such that the window's permanent function is no longer guaranteed.

The consequences can include serious damage to the sashes, cracks and breaks in the glass, and even the breaking down (misting up) of the sealed unit.

As a window fabricator, you will be liable for this kind of damage.

So take advantage of the Roto service and have your composite materials tested in advance.

The consistent quality of our glazing packers

Durable and safe spacer blocking

Roto only uses high-quality plastics made from 100% new materials without mixtures of materials or re-claimed rubber. The result is a consistent level of quality that meets the high standards demanded by our customers.

As a glazing packers manufacturer, Roto must provide sufficient compressive strength verification to comply with Technical Guideline No. 3. Roto has therefore developed a suitable test procedure in collaboration with the ift Rosenheim testing institute.

The ift Rosenheim test reports (Nos. 50938119/1-5) confirm that no unacceptable deformations have been detected in Roto glazing packers.

All the benefits at a glance

- **Certified safety:** Unique Roto QM 330 certified laboratory testing service, in compliance with Technical Guideline No. 3.
- **High customer satisfaction:** The leading packer manufacturer's (Gluske-BKV) long-standing experience and expertise
- **Zero complaint glazing:** Roto glazing packers' high quality and durability through the use of 100% new materials
- **Everything available from one company:** An extensive range of high-quality, safe and professional glazing packer solutions
