# WHO ARE WE

Autoslide, the leader in residential door and window automation, began as a thought born to Mark Hancock. He saw the future of automation merging from the office environment to our homes.

In 2011, the original version of AutoSlide was created, the first automatic sliding door system for the home that can automate existing sliding doors.

Today, there are now three automatic door systems by Autoslide:

1. The original AutoSlide system for single sliding doors
2. The MultiDrive system for multi-panel sliding door systems
3. And the newest addition, the AutoSwing for swing doors such as French patio doors.

Our systems have been designed and tested to assure safety when in use. All of our systems have been tested and certified under to the UL 325 standard on entrapment safety.

## Safety features include:

- Auto-reverse upon the door encountering an object or person
- Optional safety beams to door closures if an object or person is in the travel path.

# AUTOSLIDE

Autoslide is a compact D.I.Y. automatic sliding door system which is attached to existing manual free running patio, internal and sliding screen doors, to enable the door to open and close automatically. No more pushing or pulling of the doors.

There are several versions of the AutoSlide to choose from:
- AutoSlide standard for lighter panel doors with a drag weight up to 12 lbs.
- AutoSlide Elite for heavier door applications with a drag weight up to 45 lbs.
- iLock option that can be added to the standard or Elite versions to provide an automatic lock solution for your door.

## HOW IT WORKS

AutoSlide is a compact system designed to automate patio sliding doors.

The system consists of a motor device, electronic controller and low voltage DC power supply encased in an aluminum slim line housing.

The door is then activated by specially designed wall mounted wireless push button, installed on both sides of the opening. Motion sensors and other activation options are available as an extra add-on.

The AutoSlide can be used to automate a single panel door, including:
- Sliding patio doors
- Pocket doors
- Barn doors

Automation of doors using the AutoSlide comes in use for:
- Creating an accessible doorway for those who are unable to open a door due to limited physical mobility
- Allowing your pets to go in and out of the home independently with the built-in Pet Mode feature
- Creating touchless access to rooms in offices, hospitals, and public bathrooms.

# MultiDrive
## BY AUTOSLIDE

MultiDrive System by AutoSlide was designed to be an easy to install and universal solution to transform your existing manual sliding doors and sliding windows to an automatic experience, thereby revolutionizing your home with accessibility and convenience.

The MultiDrive system comes with a heavy-duty motor and built-in automatic lock. It is driven by a belt and can operate up to a 65 lb. drag weight. The components are all hidden behind a cover that can be custom painted to match your door frame's color.

This system was designed to operate:
- Bi-parting sliding patio doors
- Multi-track sliding patio doors
- Bi-parting barn doors
- High-end single panel doors such as the ones found in luxury condos

MultiDrive is a great way to:
- Increase accessibility by powering large and heavy doors that many people may not be able to open manually.
- Open a large room to a beautiful view, let a nice breeze in, or provide open space for a social event.

# AUTOSWING

AutoSwing is the newest automatic door system designed to automate swing doors. It will come in a standard version for lighter doors and an Elite version for heavier doors.

Just as with the rest of our systems, the AutoSwing can retrofit to existing doors or be added to a new door. Use it to automate French patio doors, entry doors, and bathrooms doors.

The AutoSwing comes in a slimline, low-profile housing, allowing it to fit in tight spaces. Features such as a built-in lithium back-up battery, external LED guide lights, internal speaker, and ability to integrate with smart locks will catapult the AutoSwing to the forefront of swing door automation.

Among creating an accessible doorway and converting your French patio doors into an automatic pet door, it provides the perfect solution to creating touchless doors for entering and exiting a bath room, reducing the number cross contamination points in the building.

## Operator Features and Performance
- Compact slim design
- Heavy-duty 24V motor
- Modularized components for easy services
- Up to 220 lb (100kg) door weight
- Speaker for audible notifications
- Integrates with smart locks
- Bluetooth app for smart phones
- Motion sensor activation
- Pet access
- Touchless privacy options for bathroom doors
- Endcaps with LED indicator lights
- Lithium back-up battery
- RS-485 Integration

# SMART PHONE APP

After nearly two years of development, Autoslide is releasing its next generation app to control our systems from your phone or tablet.

The app is Bluetooth based to allow control locally with no internet connection. Add the AutoPlus gateway to connect your system to the internet for control away from the home.

Some features found in the app include temporary mobile keys, mode status, and a door activity log.

Control your AutoSlide, MultiDrive, or AutoSwing using Alexa by adding the skill set to your Alexa account. From changing modes to locking doors, the Alexa feature will truly add convenience and security to your everyday life.

## CONVENIENCE
- Change settings to grant or limit access to family, friends and service personnel when you're not at home.
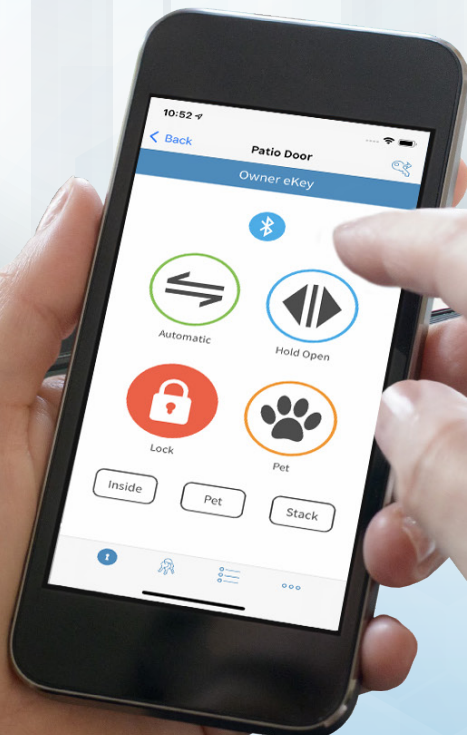

## LET PEOPLE IN WHEN YOU'RE NOT THERE WITH THE AUTOSLIDE APP
- Sensor is activated as people approach
- Notification is sent to your phone
- Grant or deny access from the app
- Open, close, lock and more with a simple tap on your iOS or Android phone
- Program your doors from your phone or tablet

## SECURITY
- 24/7 motion sensor sends alerts to your phone when someone approaches your sliding doors.

# PRIVACY PACKAGE

The Privacy Package can be added to any of our existing systems to create a fully touch-free entry and exit point to a bathroom or fitting rooms.

Handwave sensors with built-in status lights prevent having to touch a door to open or close it, as well as let you know if the room is occupied already.

An included speaker provides and audible notification to those who are visually impaired.
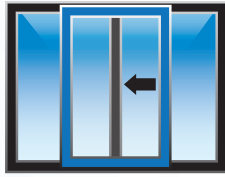

## ACTIVATION OPTIONS

All systems come standard with two wall buttons to open and close the automated door, but, because different doors required different interactions, Autoslide designed a unique access control systems and activation options such as:

- Motion sensors
- Keypads
- Remote Controls
- RFID proximity tags for pets and people
- Handwave sensors
- And a key switch cable that allows integration of third-party controls such as card readers
