

Roto Sash Lift

Over time, it's common for casement windows to experience sash sag due to gravity. Unlike traditional sash lift blocks, Roto designed a unique sash lift with built-in rollers to prevent sash sag over time. As the window is cranked to the closed position, the sash will easily glide against the rollers and return to its home position.

Features & Benefits

- Helps prevent sash sag
- Staggered rollers incrementally lift the sash to original cavity spacing with little to no friction
- Two variants offered with different heights, depending on application
- Offered in white, black, and almond

Part Number	Description	Box Quantity
628362	7/16" SASH LIFT WHITE	500
